

Point of Care Diagnostics for Peritoneal Dialysis Patients

.....
We develop a novel medical device for measuring peritoneal dialysis patients' outcomes. Our goal is to make several products regarding peritoneal dialysis patients' laboratory testing and treatment.

Our aim is to ease patients efforts on their demanding homecare and update the treatment protocol for the increasing number of peritoneal dialysis patients world- wide.

Pirgit Silvast-Äikäs, Project leader

RN, Deputy Ward Manager in Dialysis Training Center in Helsinki University Hospital

SPARK VALUE

I get support in taking further steps with my idea and I receive instruction in R&D, commercialization etc. The SPARK Program is essential to have something done.
