

HemoCure

Treating blood coagulation disorders using Evs

Our project aims to treat/mitigate and manage blood coagulation related disorders with the help of Extracellular Vesicles (EVs). EVs are small vesicles which perform diverse functions in the human body including regulation of blood coagulation.

We intend to employ EVs from healthy persons to regulate aberrant coagulation in the patients having various coagulation related disorders.

SPARK VALUE

We hope to get entrepreneurial and networking support from SPARK FINLAND. It will help us mature our idea to a well-developed product for specific market segments.

Prof. Riitta Lassila

Professor in Coagulation
Medicine,
Faculty of Medicine
University of Helsinki, Finland

Internationally well-known expert
in coagulation disorders and
medicine.

Dr. Mayank Saraswat

Research Scientist
HUSLAB, Finland

Has long standing experience in
EVs and is an expert in
Proteomics and glycoproteomics.
